भारत मौसम विज्ञान विभाग
INDIA METEOROLOGICAL DEPARTMENT

Points to be covered:-

- ❖ **IMD's Operational Mandate**
- ❖ **Heavy Rainfall Events over India (Backgrounds)**
- ❖ **NWP modelling DSS for Heavy Rainfall Warning**
- ❖ **Forecast skill of Heavy Rainfall over India**
- ❖ **Some specific cases (Success and Failure)
(Medium & Extended Range)**
- ❖ **Challenges and potential areas of improvement**

Weather and Climate Services for Self Reliant India

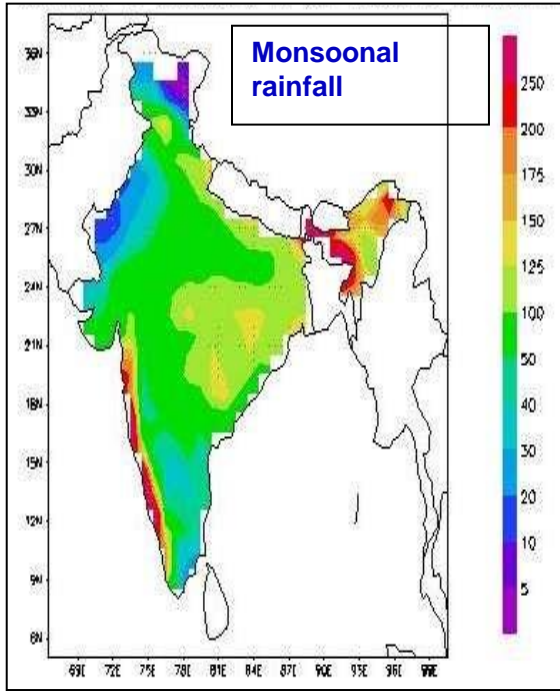

- Meteorological observations & forecast for optimum operation of weather sensitive activities
- Hence to enable enhancement in Economy
- No weather hazard to go undetected and unpredicted
- Accurate warnings against hazards with reasonable lead time, triggering response from disaster managers and public to save life and property.

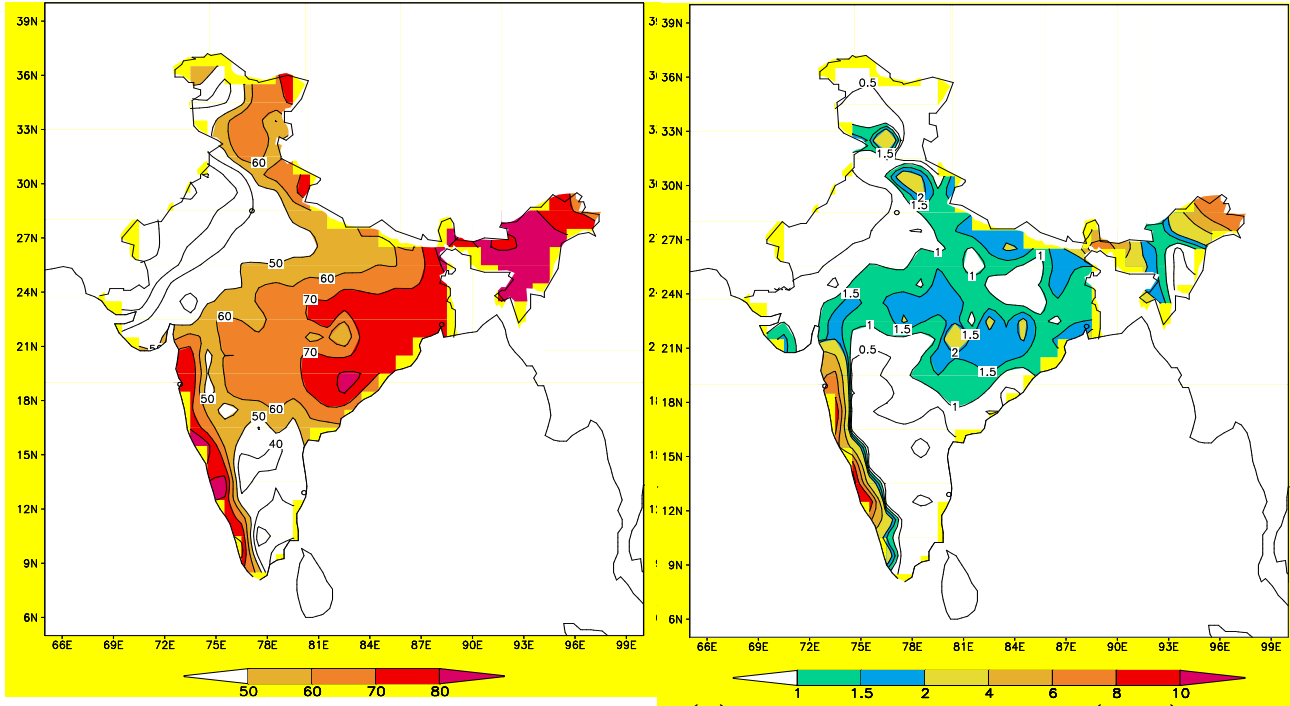

Monitoring and Forecasting Process by IMD

- IMD maintains round the clock watch with land, Ocean, atmosphere and space based observations
- IMD has a seamless forecasting strategy. IMD issues forecasts and warnings on different time scales and for different spatial scales:
 - **Nowcasting- up to six hours for all types of severe weather at all districts and stations**
 - **Short to medium range (up to 7 days) forecasts over cities, Blocks, districts and meteorological subdivisions**
 - **Extended range (up to 4 weeks) forecasts for 36 meteorological sub-divisions**
 - **Monthly and Seasonal Forecasts**

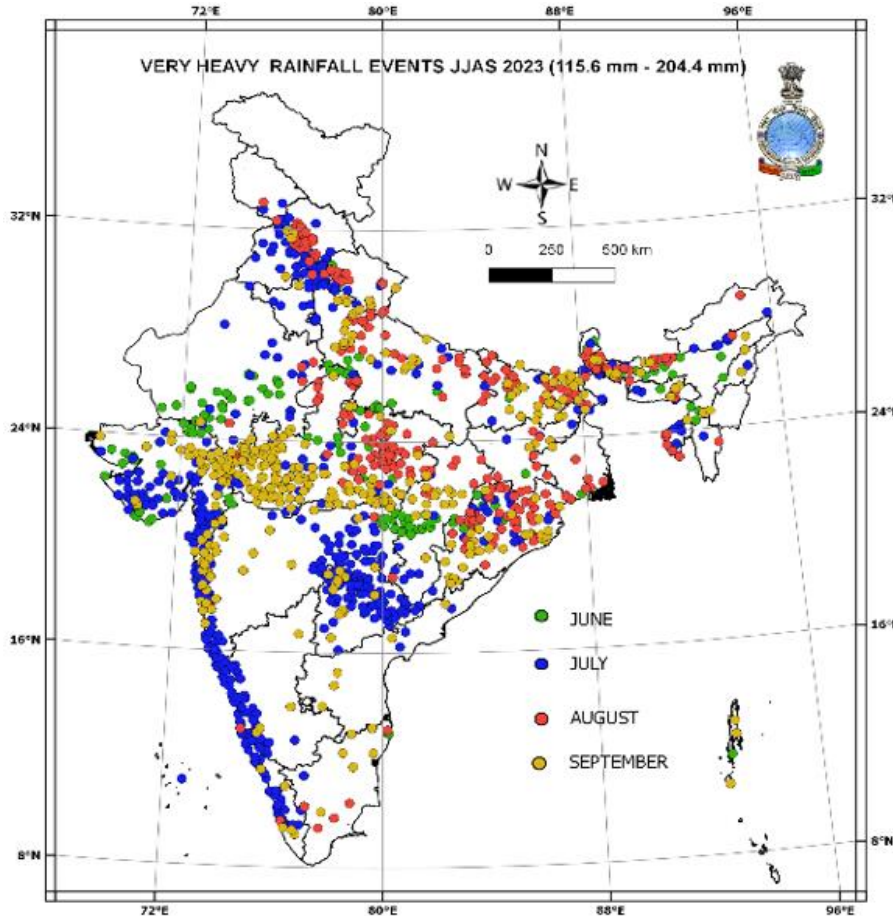

Monsoon Rainfall (JJAS)

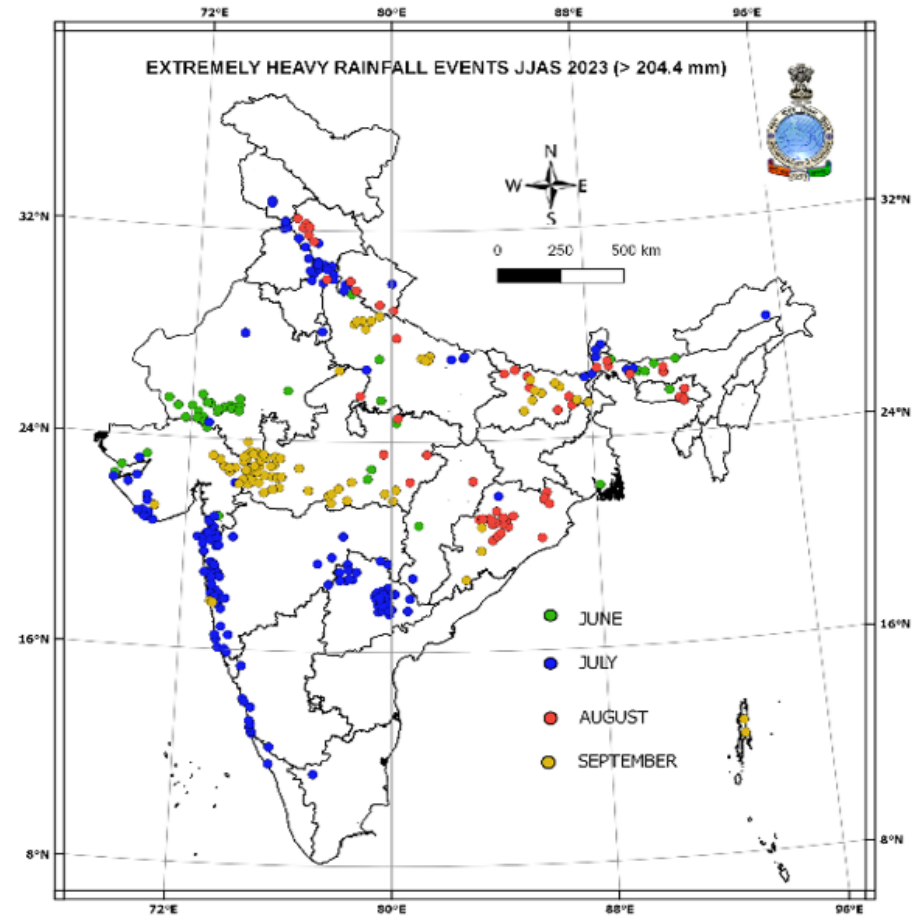

Mean % of Heavy rainfall days Mean % of Very heavy rainfall days

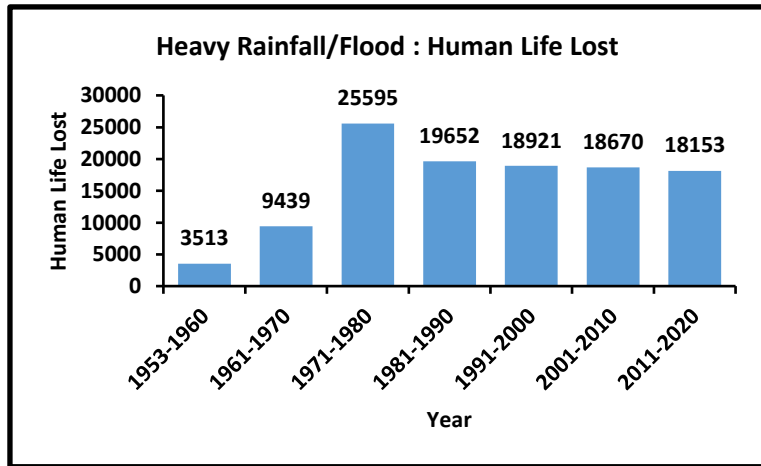

Location of Very Heavy rainfall over India during JJAS 2023

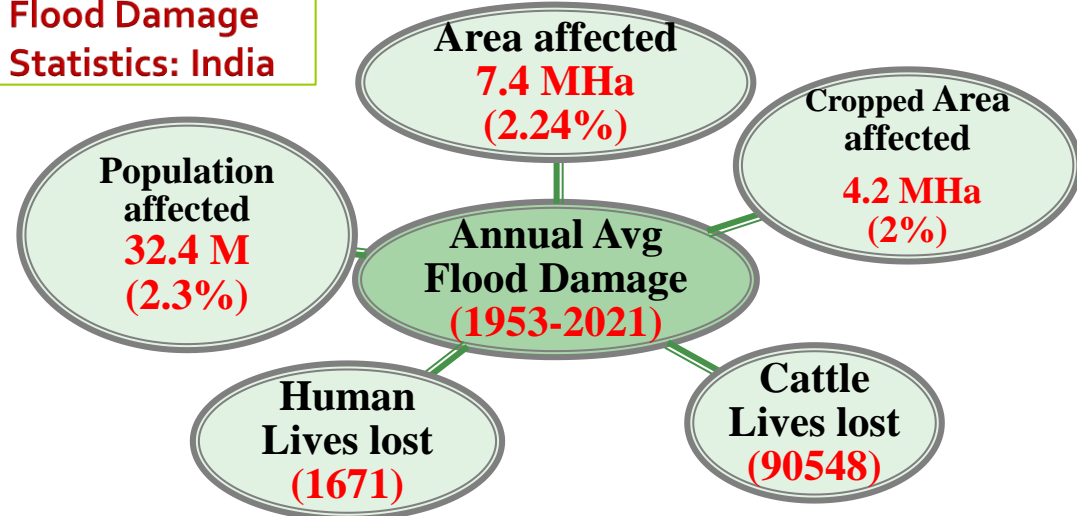

Location of Extremely Heavy rainfall over India during JJAS 2023

Flood Damage Statistics: India

Flood Damage Statistics: India

The Water Vapor Feedback

(Increase of heavy rainfall event in view of cc)

Temp dependence of saturation vapor pressure

$$e_s: e^{-5400/T}$$

$$\frac{d \ln e_s}{dT} = \frac{5400}{T^2} \approx 0.06 \text{ to } 0.1 \text{ per } K$$

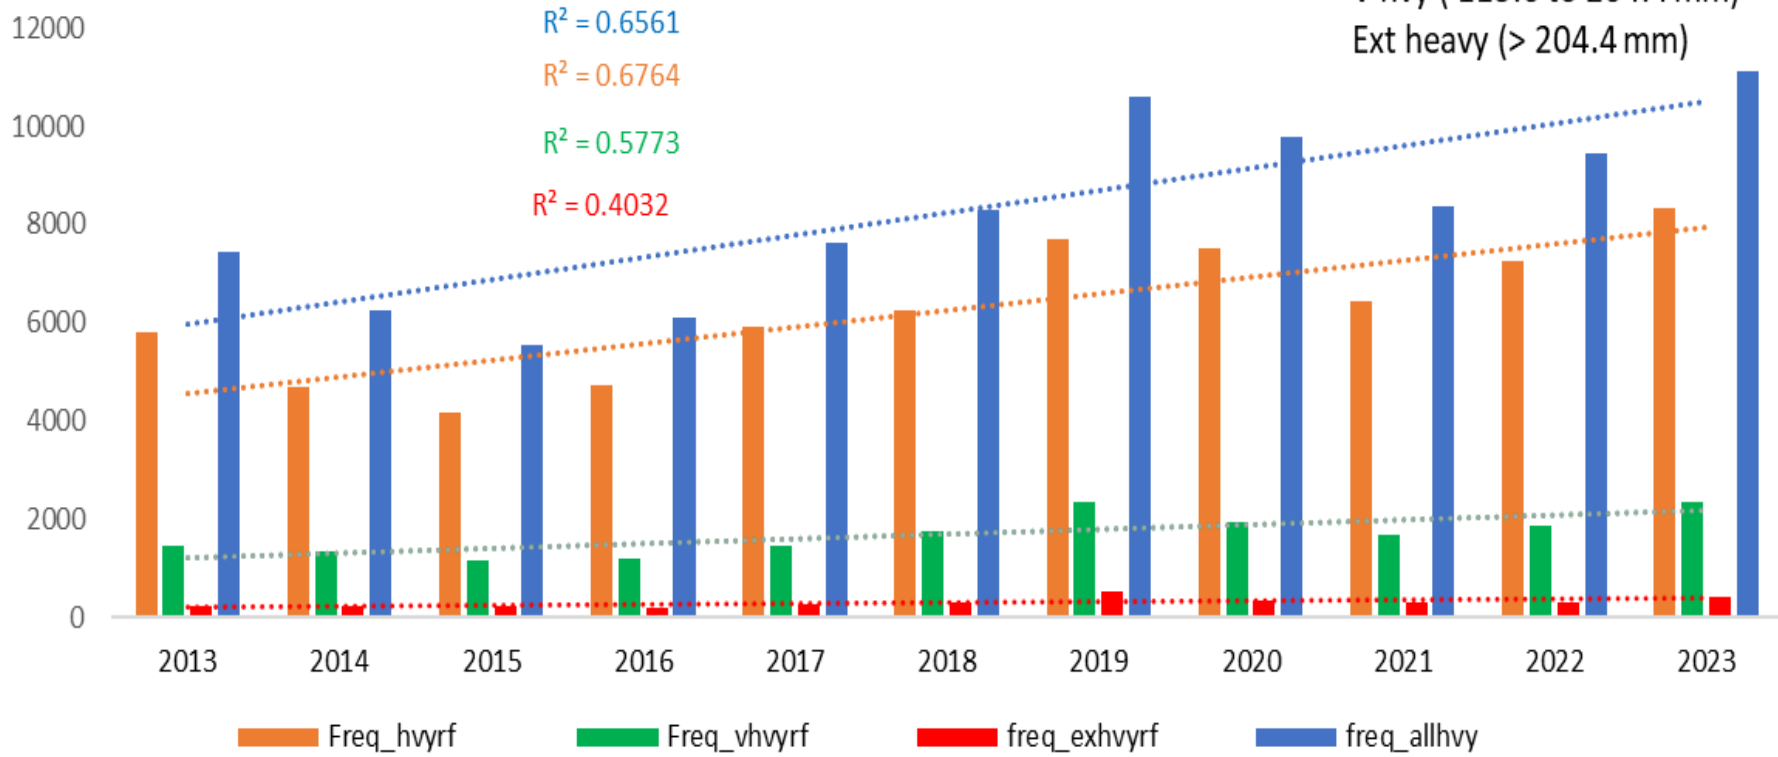

Direct consequence of global warming

Increase in the frequency of heavy precipitation events!

Frequency of Heavy, Very Heavy and Extremely Heavy rainfall over India during the period from 2013 to 2023

Frequency of Heavy rainfall Events (2013-2023)

Heavy (64.5 to 115.5 mm)
V hvy (115.6 to 204.4 mm)
Ext heavy (> 204.4 mm)

Global Warming on Rainfall Activity

Average error doubling time over central India and frequency of extreme events (rainfall >150 mm/day).

Global Warming

Rise in Temperature

Increase in Evaporation

Increase in Moisture Content of Atmosphere

Increase in Small Scale (Mesoscale) Convective System

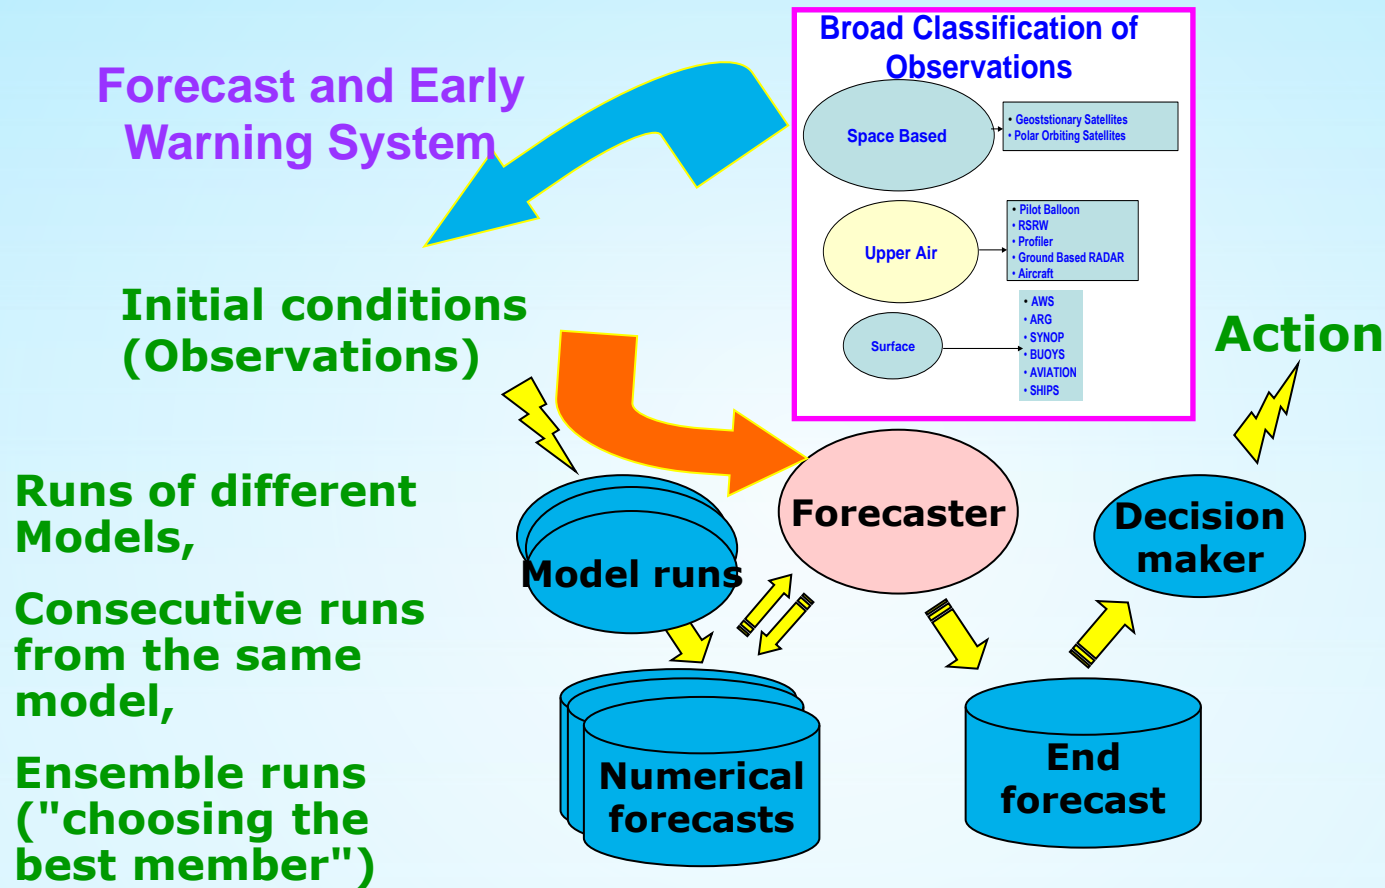

Formation of Low Pressure Area

Increase in Rainstorms over Central & North India

Daily CAPE and CINE during monsoon season

Major science themes/applications/services of IMD

Improved Forecast and Early warning system with respect to all the above components

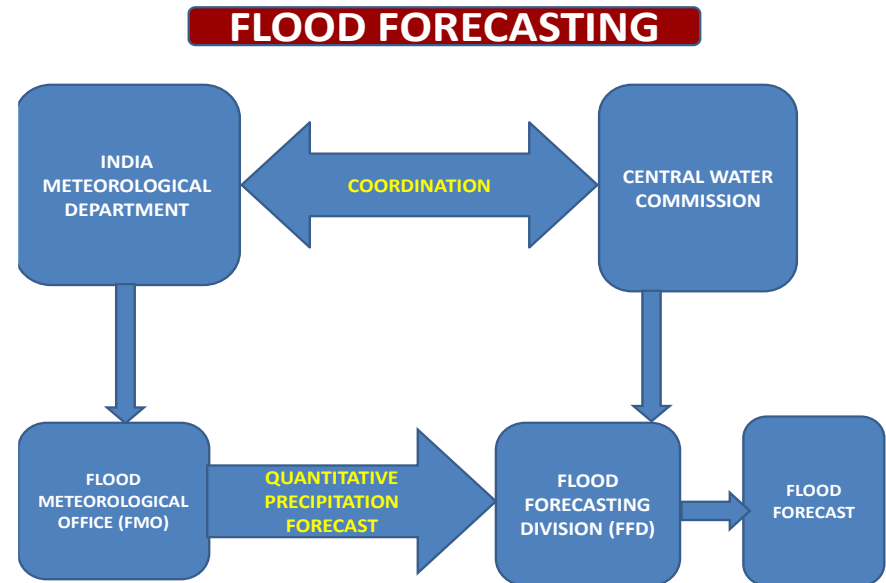

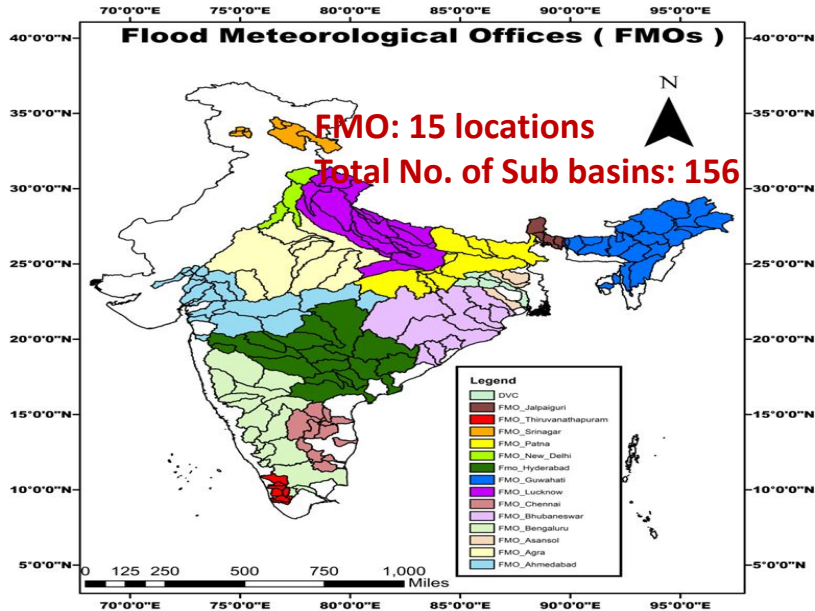

Riverine Flood Forecasting (Quantitative Precipitation Forecast)

In India Flood Forecasting activity is the joint responsibility of

- India Meteorological Department
- Central Water Commission.

IMD provides Hydromet Input through their Flood Meteorological Offices(FMOs).

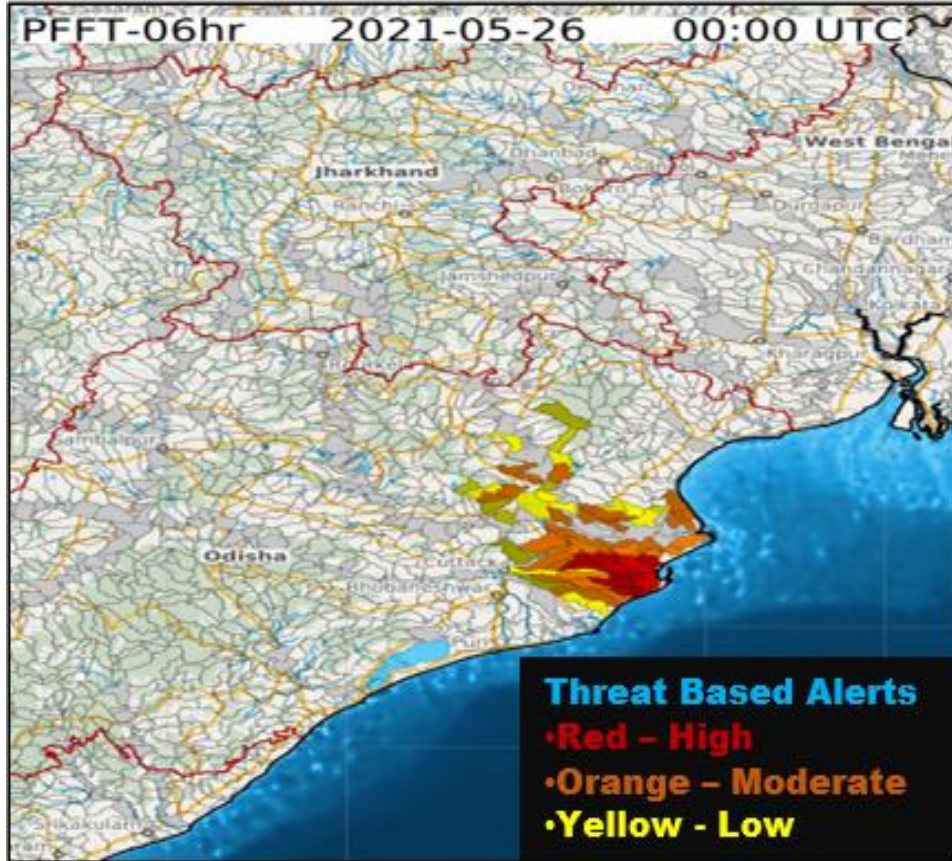

In hydromet input, Quantitative Precipitation Forecast (QPF) is the main input which is used in rainfall runoff models by CWC.

Flash Flood Forecasting

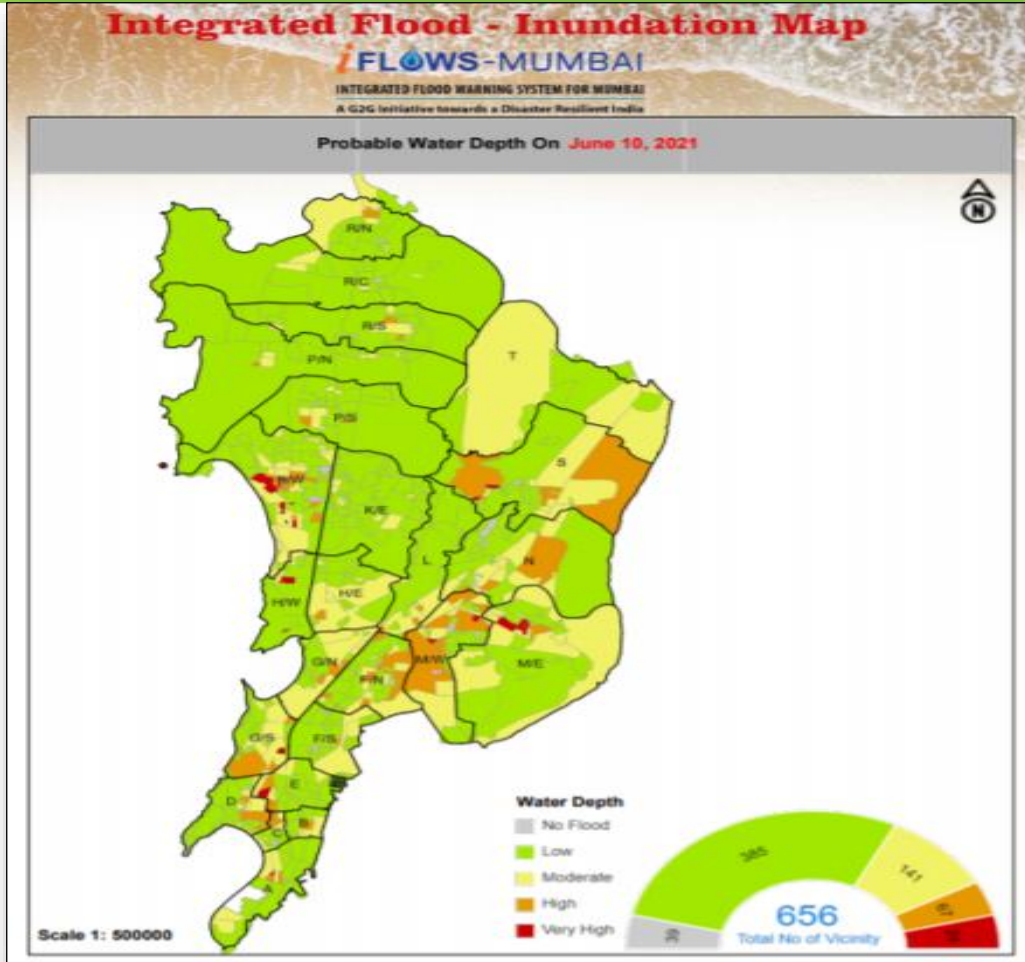

South Asia Flash Flood Guidance System

(SAsiaFFGS)

- Guidance for Bangladesh, Bhutan, India, Nepal, Sri Lanka.
- High resolution (4X4 km) and 30000 watersheds over Indian region.
- Capable of issuing flash flood Threat and risk for next 6 and 24 hours respectively.

Urban Flood Forecasting

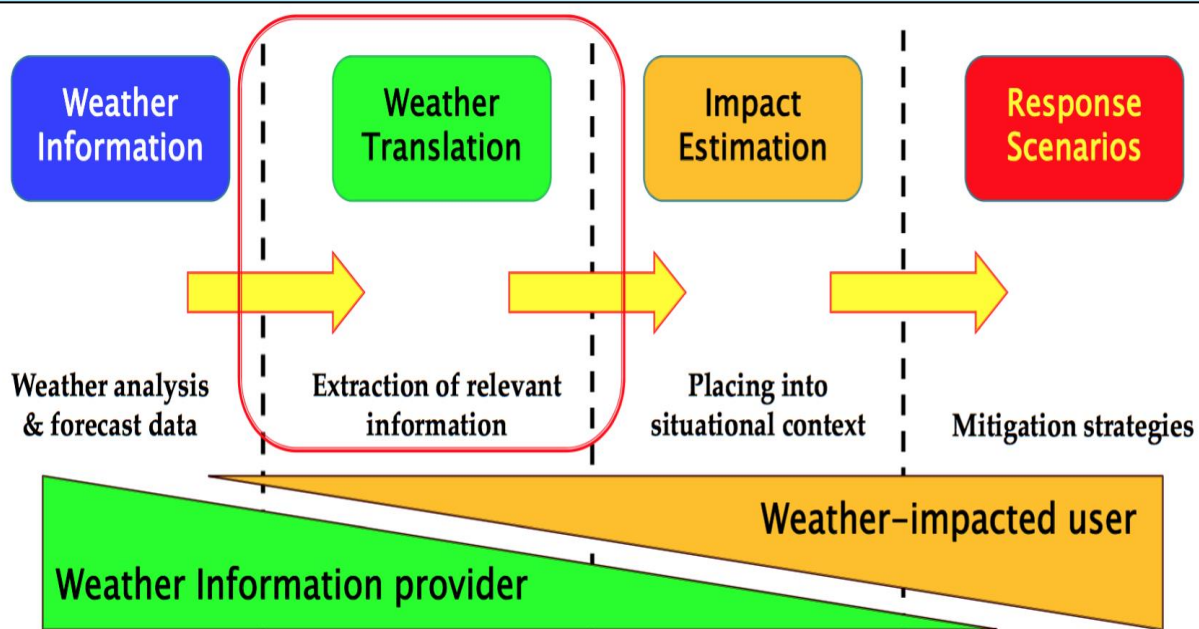

City Specific Flood Forecast (Integrated Flood Warning

- Implemented at Mumbai and Chennai City.
- Ward-wise probable water depth/inundation.

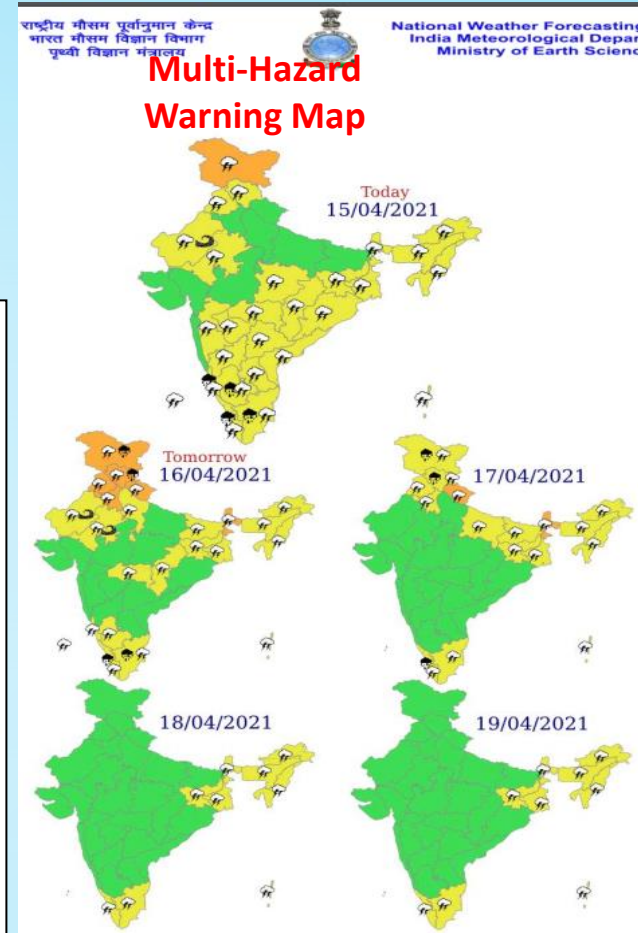

Code	Water Depth (feet)
	No flood
	3-4
	4-5
	5-6
	>6

Impact-based Forecasting in IMD

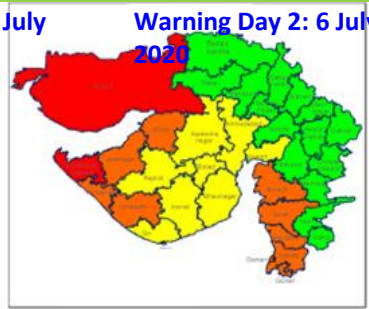

- Relevant information from weather forecast is extracted and placed into situation context to produce impact estimations;
- With potential impact information, response scenarios are set-up
- Targeted Hazards: Cyclone, Heavy rain/flood, Thunderstorm, Heat/cold wave

Source: Baode Chen and Xu Tang (2014) Translating weather forecasts into impact-relevant information

Impact Based Forecast (IBF) and Warnings for Heavy Rain

Warning (Take Action)

Alert (Be Prepared)

Watch (Be Updated)

No Warning (No Action)

IMPACT BASED FORECAST
Expected Impact with respect to red colour warning issued for the Districts namely Devbhoomi Dwarka, Porbandar, Jamnagar, Kutch:
<ul style="list-style-type: none">✓ Major damage to kuchcha roads due to inundation.✓ Major disruption in traffic in city areas.✓ Inundation of low lying areas leading to damage to kuchcha houses.✓ Water logging in underpass in city areas.✓ Sudden reduction in visibility during heavy downpour leading to road accidents.

IBF & Warning Stages

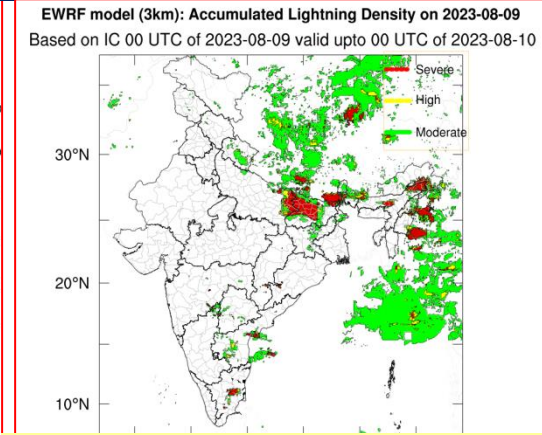

- Stage -1: Heavy rainfall Watch-(3-4 days lead time daily update)
- Stage-2: Heavy rainfall Alert: (48 hours prior to the occurrence of event at 12 hourly updates)
- Stage-3: Heavy rainfall Warning (24 hours prior to the occurrence of event at 06/12-hourly updates)
- Stage-4: 12-Hours prior to occurrence event—at 3-hourly updates.

Temporal scales	Numerical NWP/Climate Models	Resolutions and Frequency of Update

based on 08-06-2022 valid for 03 UTC of 13-06-2022

Some Challenging Issues

IMD NWP RESEARCH REPORT No.: 02/2023

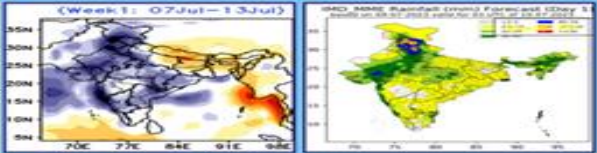

Government of India
Ministry of Earth Sciences
India Meteorological Department

**A Report
on
Assessment of NWP Models Forecast of the
Unprecedented Rainfall over North India
During 8-13 July, 2023**

July 2023

D. R. Pattanaik, M. T. Bushair, C. J. Johny, Akhil Srivastava,
Amit Bhardwaj, Trisanu Banik, T. Arulalan, D.S. Pai and M. Mohapatra

Numerical Weather Prediction division
India Meteorological Department
Ministry of Earth Sciences
Government of India

Though the ERF has got useful skill upto 2 to 3 weeks, there are occasions when the lead period is only one week.

The unprecedented rainfall over North India during 8-13 July associated with westerly-monsoon interaction could predict the active phase of monsoon with

iv - Leadtime of this event was small

ERF - 5th July, 2023

ERF - 28 June, 2023

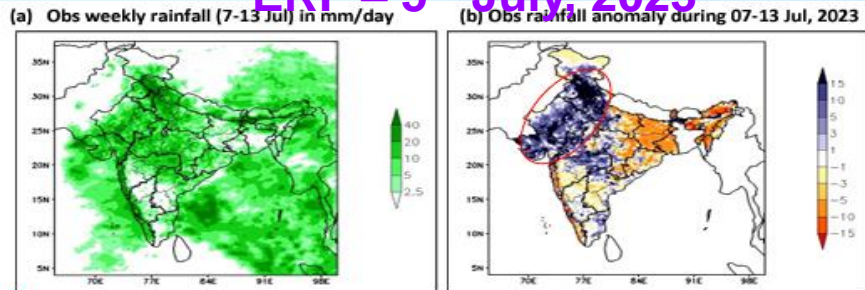

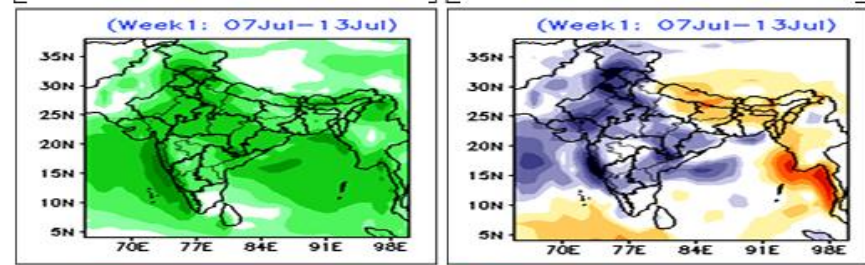

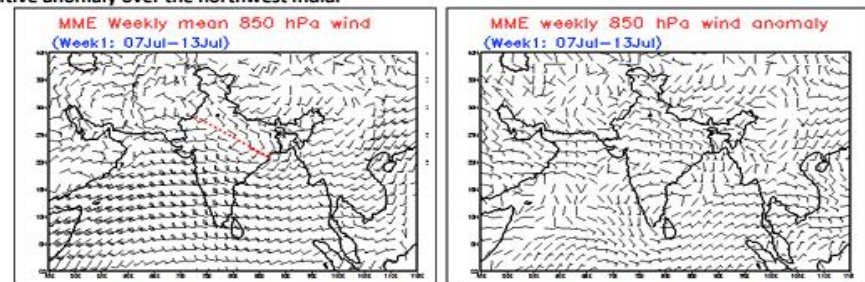

Fig. 17 : The weekly mean rainfall and its anomaly for the period from 07-13 July, 2023. It indicates a large positive anomaly over the northwest India.

Met subdivision-wise forecast rainfall from the NWP model and MME valid for 10th July 0300 UTC

(a) Day 5 forecast based on 5th July IC (Valid for 10th July)

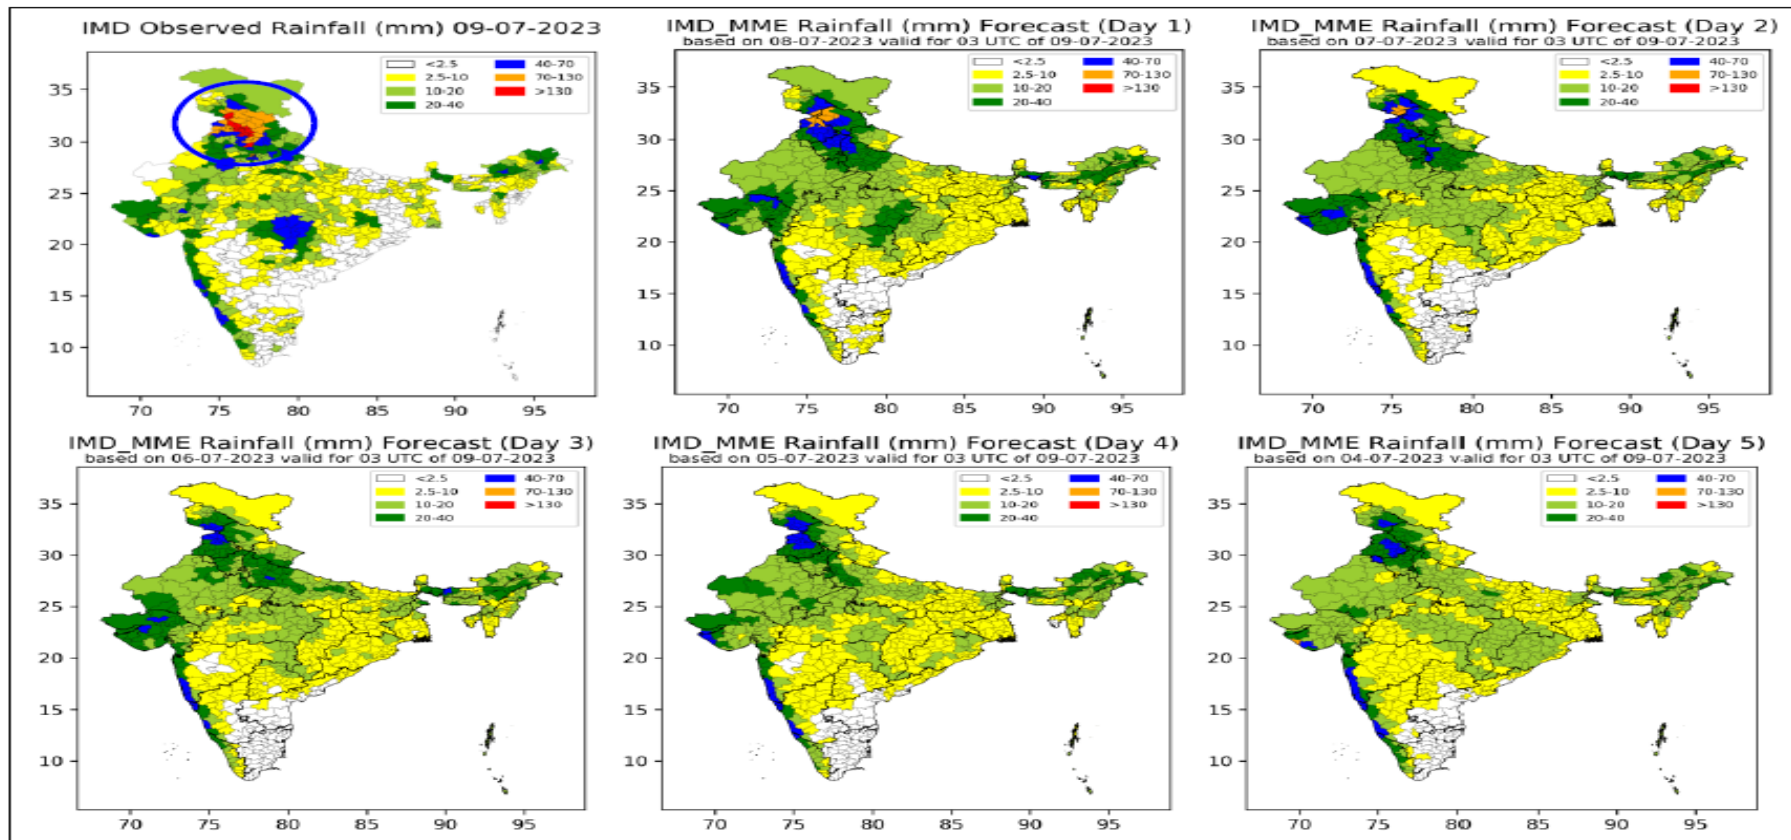

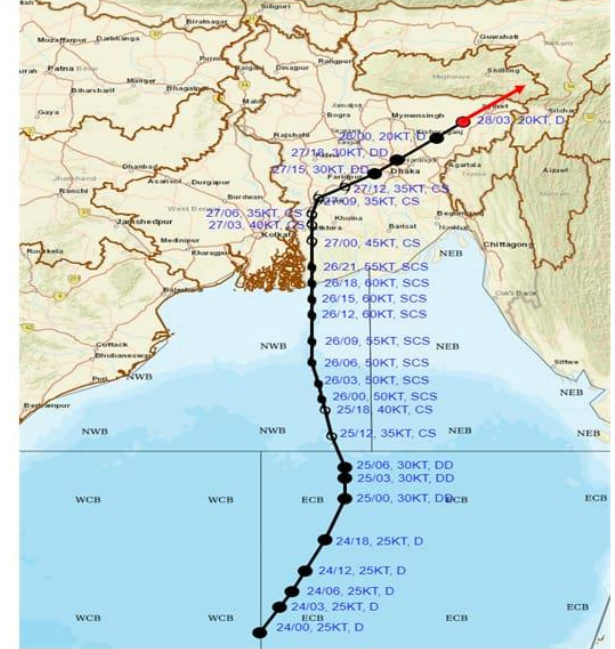

Fig. 25 : (MME-based forecast rainfall for 5 days (24 hr to 120 hr) valid for 9th July 2023 along with the observed rainfall of the day.

The high rainfall belt over northern India is well predicted in the MME forecast on day 1 and day 2 forecasts. The day 3 to day 5 forecasts are predicted well with regard to the location, however, their intensity is slightly underestimated.

CASE – V : SYNOPTIC SYSTEM (28-29 MAY 2024)

FORECAST TRACK ALONGWITH CONE OF UNCERTAINTY IN ASSOCIATION WITH DEPRESSION (REMANANT OF CYCLONIC STORM 'REMAL') OVER EAST BANGLADESH BASED ON 0300 UTC (0830 IST) OF 28TH MAY 2024.

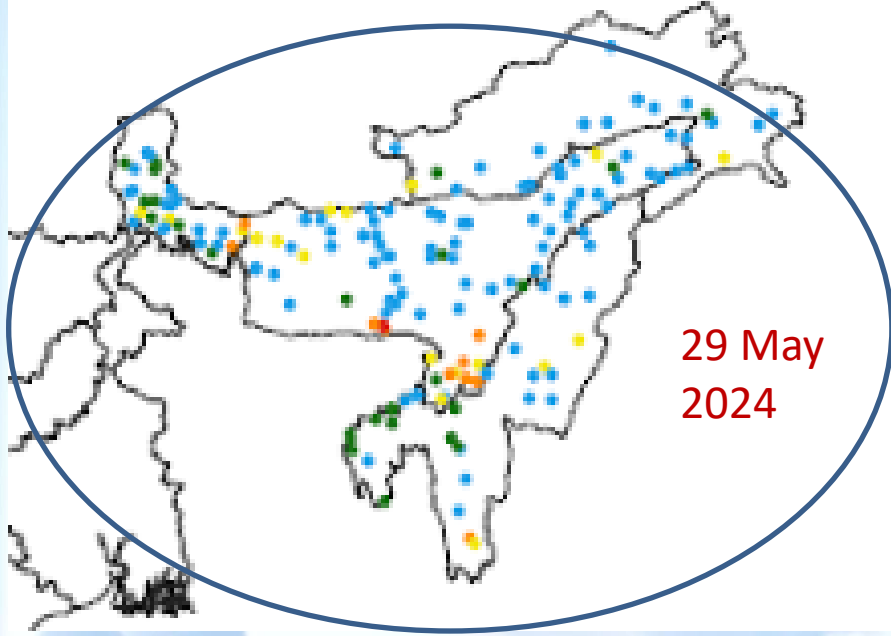

DATE/TIME IN UTC
IST-UTC + 0530

L: LOW PRESSURE AREA
 WML: WELL MARKED LOW PRESSURE AREA
 D: DEPRESSION (17-27 KT)
 DD: DEEP DEPRESSION (28-33 KT)
 CS: CYCLONIC STORM (34-47 KT)
 SCS: SEVERE CYCLONIC STORM (48-63KT)
 VSCS: VERY SEVERE CYCLONIC STORM (64-89 KT)
 ESCS: EXTREMELY SEVERE CYCLONIC STORM (90-119 KT)
 SuCS: SUPER CYCLONIC STORM (≥ 120 KT)

- LESS THAN 34 KT
- 34-47 KT
- ≥ 48 KT
- OBSERVED TRACK
- FORECAST TRACK
- CONE OF UNCERTAINTY

Meghalaya: Sohra RKM 590 mm.

Heavy Rain Warning for Day 1 and Day 2

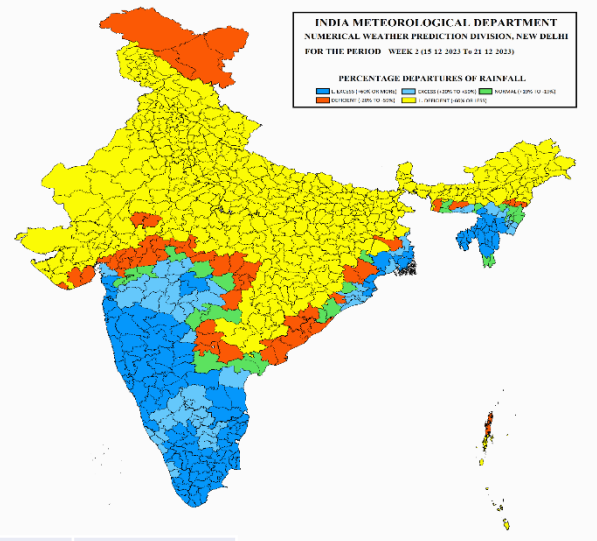

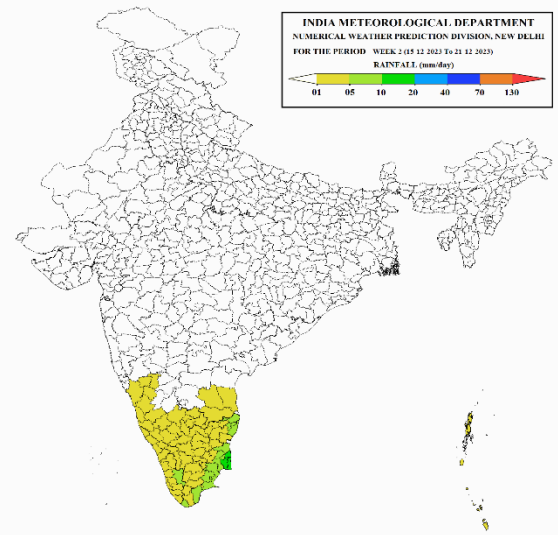

Legends

- Very Light to Light Rainfall (0.1 - 15.5 mm)
- Moderate Rainfall (15.6 - 64.4 mm)
- Heavy Rainfall (64.5 - 115.5 mm)
- Very Heavy Rainfall (115.6 - 204.4 mm)
- Extremely Heavy Rainfall (≥ 204.5 mm)

IMD Observed Rainfall (mm) 18-12-2023

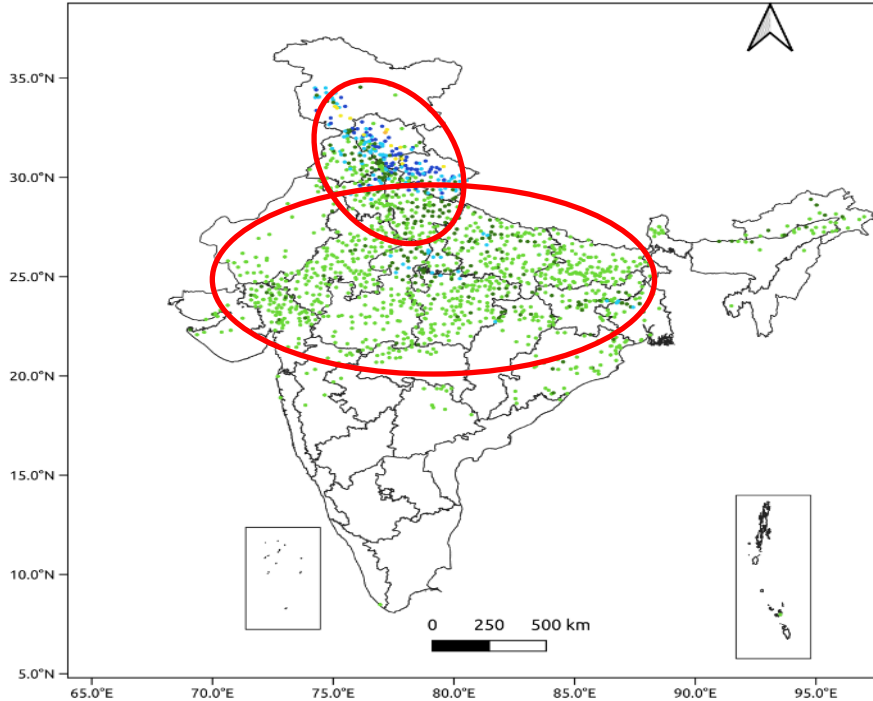

Forecast valid for						
20231218	GFS	GEFS (mean)	NCEP	NCUM	JMA	ECMWF
Observation (946 mm)						
Day 1	126.6	46.4	200.0	856.3	64.0	373.1
Day 2	172.4	90.0	43.0	408.9	57.2	310.1
Day 3	351.6	189.0	12.4	160.6	38.4	162.2
Day 4	143.3	46.8	66.9	57.3	30.4	60.4
Day 5	103.9	40.0	126.3	97.2	24.9	134.9
Day 6	113.0	37.7	36.8	329.3	12.0	23.1
Day 7	98.5	27.5	217.2	59.4	14.0	73.4

Case – v : ERF of Western Disturbances (1-7 Mar), 2024

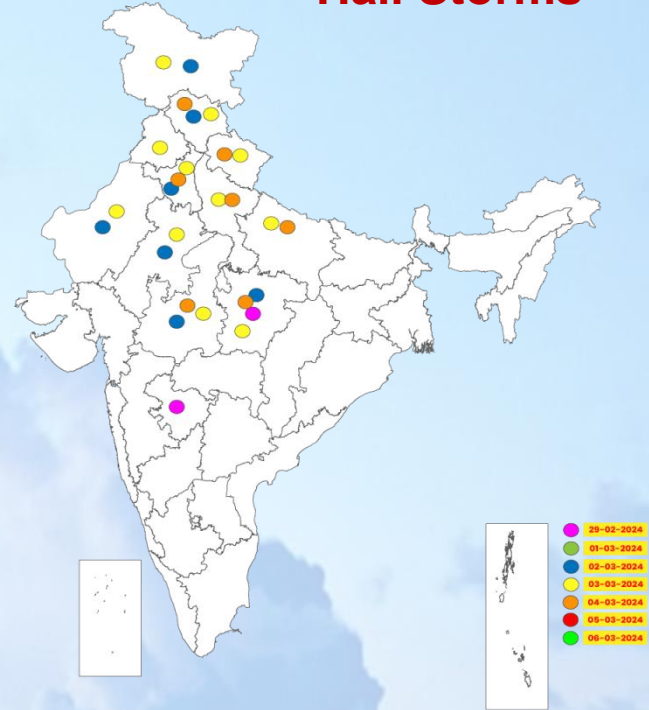

7 days cumulative rainfall recorded over different stations during 0830 IST of 28-2-2024 to 0830 IST of 6-3-2024

ERF Predicted weekly rainfall anomaly (1-7 Mar) : ICs : 28,21 and 14 Feb

IC = 28 Feb

IC = 21 Feb

Forecast Rainfall Anomaly (mm/day) (00Z=0530 hrs IST)
 (Week1:00Z22Feb-00Z07Mar) (Week2:00Z07Mar-00Z14Mar)

Forecast Rainfall Anomaly (mm/day) (00Z=0530 hrs IST)
 (Week1:00Z22Feb-00Z29Feb) (Week2:00Z29Feb-00Z07Mar)

Forecast Rainfall Anomaly (mm/day) (00Z=0530 hrs IST)
 (Week1:00Z15Feb-00Z22Feb) (Week2:00Z22Feb-00Z29Feb)

IC = 14 Feb

Challenges in Predictability of Mesoscale Events

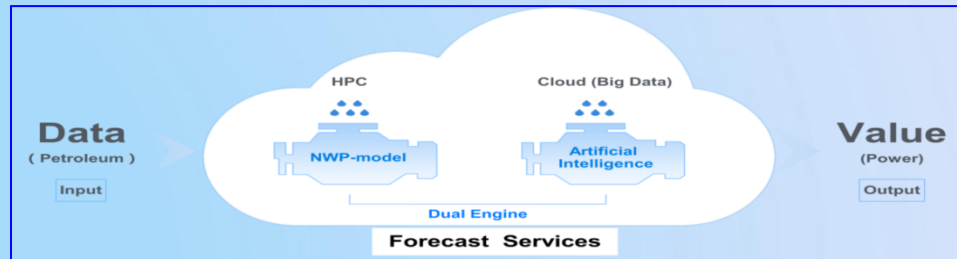

- Predictability of meso-scale system is less
- Due to Global Warming the prediction of Extreme Rainfall Events likely to decrease
- Error doubling time of extreme rainfall event during last 30 years decreased from about 3 days to 1.5 days

Solutions to improve Predictability of Mesoscale Events

- Enhancement of observational network to detect mesoscale systems
- Improve data assimilation of models for these systems
- Use High Resolution Models
- To address uncertainty, provide probabilistic forecast
- Warning system & dissemination be made smarter to utilise reduced lead time to reach the last mile
- Capacity building of forecasters, disaster managers, media & general public

Future Plan

- Significant improvement in MHEWS and DRR in recent years leading to a drastic reduction in loss of lives, especially due to cyclones and Heat Waves
- Scope for weather hazard monitoring and forecasting to meet Early Warning for All Initiative of UN and WMO based on following:
 - ❖ Improved Value Chain (Observation→Modeling→ Forecasting → Severe weather warning→Sectoral Applications) including R&D.
 - ❖ **Dual engine concept : AI/ML application in conjunction with Numerical Weather Prediction (NWP) modeling to improve the point rainfall**
 - ❖ Improvement in forecast accuracy by 10-15% by 2030
 - ❖ Forecasting of severe weather Hazards at Gram Panchayat level(5x5km) by 2030
 - ❖ Dynamic Impact based forecasting & risk based warning for all severe weather
 - ❖ Last mile connectivity to meet early warning for all (Har Pal Mausam and Har Ghar Mausam) by 2025

Thank you
